

SHASHA

Web Developer & Automation Specialist

Email: hello@shasha.dev | GitHub: github.com/shasha | Location: China

PROFILE

Full-stack web developer focused on automation engineering. I build React + TypeScript front-ends and FastAPI / Python back-ends, then ship them with Docker and Nginx. I like turning repetitive manual work into reliable, scheduled pipelines.

CORE SKILLS

Front-end ... React, TypeScript, JavaScript, Bootstrap, responsive UI
Back-end Python, FastAPI, Node.js, RESTful API, auth & RBAC
Database PostgreSQL, Redis, data cleaning & incremental sync
DevOps Docker, Nginx, Linux, Git, CI/CD, shell automation
Other C++ (performance oriented), scraping, automated testing

EXPERIENCE

Full-stack Developer - Web platform / remote 2023 - Present

- Built and maintained the front-end architecture with React + TypeScript.
- Designed REST APIs and data models with FastAPI + PostgreSQL.
- Automated build and release with Docker + Nginx (one-command deploy).

Automation Engineer - Data & automation 2021 - 2023

- Wrote Python crawlers, cleaning jobs and scheduled background tasks.
- Built monitoring and alerting for long-running jobs.
- Packaged internal tooling and documentation for the team.

Backend / Engineering Practice 2020 - 2021

- Studied the full web delivery flow: UI, API, server deployment.
- Practised C++ and algorithm / performance fundamentals.

SELECTED PROJECTS

Automation Hub - task scheduling console (Python, FastAPI, Docker)
Nova Admin - full-stack admin system (React, TypeScript, PostgreSQL)
PipeFlow - data collection & cleaning pipeline (Python, Playwright)
DevOps Toolkit - one-command deploy scripts (Docker, Nginx, shell)
Quant Lab - backtest engine: C++ core with Python strategy layer

EDUCATION

Bachelor degree, Computer Science related 2016 - 2020
